## PROFESSIONAL SUMMARY

To design, develop, and deploy intelligent web applications by integrating Full Stack Development technologies with Generative AI models, enabling automated content generation, enhanced user experiences, and data-driven decision-making through scalable and secure software solutions.

## EDUCATION

Government College of Engineering, Erode

Sep 2024 -May 2028

- *B.Tech in Information Technology | Erode, Tamil Nadu*

## SKILLS

- **Programming Languages:** C,Python, Java, JavaScript
- **Scripting & Web Technologies:** HTML, CSS, JavaScript, React.js, Node.js, Express.js
- **Database:** MongoDB, SQL,Neon
- **Tools & Platforms:** Git, GitHub, VS Code, Render,Vercel
- Microsoft office(Word,Excel,Powerpoint)

## PROJECTS

- **Aptitude| *Python(Flask),HTML,CSS and JavaScript*** **May 2025-Feb 2026**

Developed an Aptitude Learning Platform using Python, HTML, CSS, JavaScript, Render, and Neon Database to provide interactive aptitude tests, performance tracking, and personalized learning experiences.

- **Rapid Crisis Response | *Python(Flask),HTML,CSS and JavaScript*** **March 2026-April 2026**

Developed a full-stack Rapid Crisis Response web application using HTML, CSS, JavaScript, and Python (Flask/Django) with geolocation-based emergency reporting and deployed it on Render for real-time accessibility.

- **E-Learning Platform | *HTML,CSS,JS,React.js,Node.js,Typescript,MongoDB,Cloudflare*** **July 2026-August 2026**

Students often face difficulties accessing organized learning materials and tracking their learning progress,while administrators face challenges in managing courses and student activities.

The E-Learning Platform provides a centralized system for managing courses, learning materials, users, and progress using React.js, Node.js, TypeScript, MongoDB, and Cloudflare.

## CERTIFICATIONS

**Full Stack Development — Novitech & Rinex:** Strengthened my ability to create complete web applications by working across both client-side and server-side development. Learned to structure application components, handle user requests, connect services, and implement functional features while focusing on usability and performance.

**Generative AI — Rinex:** Explored the capabilities of large language models and AI-driven systems for solving real-world problems. Practiced prompt design, content generation, and AI-assisted workflows while gaining an understanding of how Generative AI can be incorporated into modern software solutions.
